

Chemical Peel Pre-Treatment Instructions

One (1) week prior to treatment, the following treatments and products should be avoided:

- Waxing, depilatories, electrolysis, or laser hair removal on treated area
- Laser skin rejuvenation on treated area
- Botox® & Dermal Filler Injections on or around the treated area
- Microdermabrasion or HydraFacial™ (unless recommended by practitioner)
- Other chemical peels
- Exfoliating masques, loofahs, and other coarse sponges

**Clients can resume the above treatments when skin is healed and no signs of erythema (redness) or peeling is present; usually 5-7 days.*

Three (3) days prior to treatment, discontinue use of the following products:

- Any retinoic acid derivatives (Retin-A, Renova, Retinol, Atralin, Avita, Tazorac or Avage, Ziana), Azelex, or Differin

**Clients can resume the above products when skin is healed and no signs of erythema (redness) or peeling is present; usually 5-7 days.*
