

PRE - TREATMENT INSTRUCTIONS FOR BOTULINUM TOXIN THERAPY (Botox® - Dysport™)

In an ideal situation it is prudent to follow some simple guidelines before treatment that can make all the **difference between a fair result and a great result**, by reducing some possible side effects associated with the injections. We realize this is not always possible; however, **minimizing these risks is always desirable.**

- **It is wise to avoid Alcoholic beverages** at least **24 hours prior** to treatment (Alcohol may thin the blood increasing risk of bruising).
- **Avoid Anti-inflammatory / Blood Thinning medications** ideally, for a period of **two (2) weeks before treatment.** Medications and supplements such as Aspirin, Vitamin E, Gingo Biloba, St. John's Wort, Ibuprofen, Motrin, Advil, Aleve, Vioxx, and other NSAIDS are all blood thinning and can increase the risk of bruising/swelling after injections.
- **Schedule Botox® appointment at least 2-4 weeks prior** to a **special event which may be occurring, i.e., wedding, vacation,** etc. etc. It is not desirable to have a very special event occurring and be bruised from an injection which could have been avoided.
